

Sat³ Vehicle Tracking

MAXIMISE YOUR ASSETS, CONTROL YOUR COSTS

For all fleet operators, vehicle and driver management is vital for the smooth operation and profitability of the business.

We understand that businesses each have different requirements, which is why the Sat³ Vehicle Tracking System has been designed to work with any size or type of fleet, and continue to grow and develop with you.

With vehicle positions updated every 2 minutes as standard you are in full control of your fleet at all times. Both manual and scheduled reports deliver the latest information in either MS Word or Excel documents, which can be viewed on screen or e-mailed to anyone to build up a detailed historic archive of information.

Our web based system is user friendly and our fixed cost package includes full comprehensive training and ongoing technical support from our dedicated Customer Service Team.

Sat³ is also compatible with the majority of routing and vehicle scheduling software packages, including the Optrak Multi-User Application.

Increased Productivity

- Efficient route planning
- Improved vehicle utilisation
- Reduced vehicle and driver downtime

Reduced Costs

- Reduced overtime
- Fuel savings
- Lower insurance premiums
- London congestion zone alerts & reports

Better Management

- Visibility and control
- Live and historic data
- Vehicle usage overview

Improved Customer Service

- Better scheduling and timekeeping
- Enhanced delivery data
- Faster & more responsive

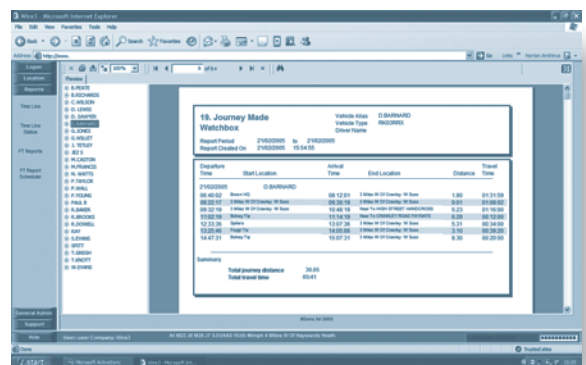

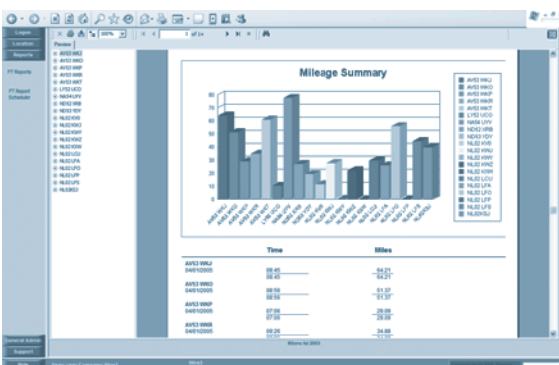

Enhanced Security

- Real-time tracking of stolen vehicles
- Vehicle Panic Alarm Option
- Personal Panic Alarm Option
- Automatic Driver ID option

Increased Compliance

- Working Time Directive
- Protection of mobile workforce
- Reduced environmental impacts

Combine Sat³ Vehicle tracking with our TomTom Satnav and Wireless Delivered systems for a complete vehicle and delivery service management solution.
